EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

IN THE CLAIMS

The following obvious errors have been corrected.

Claim 7 has been amended as follows:

7. The method as recited in claim 1, wherein said template represents relative movement between the stamping die and said end tool along a transfer path toward a release position where the end tool releases [the] a workpiece.

Claim 8 has been amended as follows:

8. A method of checking clearance between a stamping die and a workpiece transfer system end tool, said method comprising the steps of:

a.) positioning a template comprising a surface representative of relative movement between the stamping die and the end tool relative to a portion of a stamping die; and

b.) indicating that the end tool will contact the stamping die in response to a portion of surface of the template contacting said stamping die.

Claim 11 has been amended as follows:

11. The method as recited in claim 8, wherein the surface of the template represents relative movement of the end tool moving toward a grasp position where the end tool grasps [the] a workpiece.

Claim 12 has been amended as follows:

12. The method as recited in claim 8, wherein the surface of the template represents relative movement of the end tool moving away from a release position where the end tool releases [the] a workpiece.

Claim cancellation:

This application is in condition for allowance except for the presence of claims 16-22 to a non-elected invention without traverse.

Accordingly, claims 16-22 have been cancelled.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: One reason for allowance is that the claimed invention *inter alia* involves the checking of clearance between a stamping die and a workpiece transfer system end tool where a template is used to indicate the end tool will contact the stamping die in response to the stamping die contacting the template surface. The prior art does not show this feature where the surface of a template is used to indicate proper clearance between a stamping die and workpiece transfer system. The closest

teaching is directed to Goto where a pattern is developed between the movement of the die and the workpiece transfer system to ascertain whether interference will occur during operation of the transfer press. However, no contact with a template surface is used to ascertain this interference parameter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

INQUIRIES

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner D. Crane whose telephone number is (571) 272-4516.
